CANADA

JULY 1958

General Summary of Weather Conditions

JULY 1958

Except for a small area along the southeast coast of Nova Scotia, much of the Northwest Territories and the whole of British Columbia, the last having record-breaking temperatures, July was a cold month over the whole of Canada, with temperatures generally averaging two or three degrees below normal. Precipitation was above normal in New Brunswick, southern Quebec, northwestern Ontario, southern Manitoba and southern Alberta, and below normal in southern Nova Scotia, much of southern Ontario, an extensive area west of Lake Manitoba and the entire province of British Columbia.

July in Newfoundland was generally cool and cloudy. Temperatures ranged from normal or near normal in the south, to three degrees below normal in the extreme northwest, and to four to five degrees below normal in the vicinity of Gander, where temperatures were below normal on twenty-one days.

July was generally unsettled in Newfoundland. Total precipitation was near normal at most stations,but below normal to the northwest and above normal in the southeast with St. John's reporting 55 per cent above normal precipitation, most of which fell during storms on the 8th and 20th. On July 20th to 21st a storm moving northeastward across the province brought strong winds and heavy rain to the southeastern and central parts of the province, with 2.42 inches of rain falling on St. John's on the 20th, accompanied by a severe electrical storm.

Temperatures in Labrador during July were generally slightly below normal; precipitation was variable being near normal over most of the area but 40 per cent above normal at Goose Bay and nearly three times normal at Cape Harrison.

Except for the southeastern coast of Nova Scotia, where temperatures were normal to slightly above, July was generally rather cool in the Maritime Provinces with no periods of warm weather and several spells of well below normal temperatures.

Precipitation in the Maritimes in July was for the most part of a showery character and the region showed a wide variation of total amounts, with both excesses and deficiencies from normal occurring. There were deficiencies of about thirty per cent in southern Nova Scotia and northern New Brunswick, excesses of 20 to 40 per cent in northern Nova Scotia and Prince Edward Island, and, except for a small area near Moncton which reported precipitation only slightly above normal, excesses in southern New Brunswick varying from 40 per cent in the east to over 100 per cent in the southwest. The greater part of the month was actually fairly dry with precipitation falling during three periods, on the 8th, 11th and 12th, and a severe storm on the 28th and 29th, the last bringing amounts varying from an inch at Moncton to over two and a half inches at Saint John.

Temperatures in Quebec in July averaged, generally, one to three degrees below normal, with few periods of warm weather. Eighty-seven point five degrees at Dorval on the 24th was the highest temperature reported for the province.

Precipitation in Quebec was generally below normal in the north and above normal in the south. Deficiencies were the order of 20 to 30 per cent along the north shore of the Gulf of St.Lawrence northward into Ungava. Excesses over normal varied from 20 to 50 per cent in the Saguenay region and along the Gatineau River, and from 25 to nearly 100 per cent along the St. Lawrence valley and in southeastern Quebec. Montreal Airport reported 6.38 inches of rain, a new July record for the airport, the previous July record being 5.89 inches in 1945. Precipitation fell mainly in local storms; on July 5th to 6th, a violent storm in the Montreal area gave 2.85 inches of rain in twenty-four hours, a new twenty-four hour record for the airport for seventeen years, and on the evening of July 8th a brief violent thunderstorm deposited .68 inch in twenty minutes, a new record for the airport for this short period.

Except for a small area along the eastern shore of Lake Huron, temperatures throughout Ontario averaged slightly below normal in July - one to two degrees below normal in southern Ontario, and three degrees below normal in northeastern Ontario. There were few extremes of temperature, the highest temperature reported being 90 degrees at Malton, and in general maximum temperatures were rather low for a summer month.

Precipitation throughout Ontario in July was generally of a showery character with a few widespread storms. There were excesses of 75 per cent in the Ottawa area, 80 per cent in the extreme southwestern tip of southwestern Ontario, small excesses in a narrow belt from Stratford to Hamilton and along the shores of Georgian Bay, excesses of 20 to 40 per cent near Sudbury and North Bay, and excesses of 30 to 80 per cent in northwestern Ontario. The remainder of the province showed deficiencies, usually small, but reaching 40 per cent at a few places between Trenton and Brockville, along the eastern shores of Lake Huron and at a few points in the eastern part of northern Ontario. There were a number of severe thunderstorms, particularly in the early part of the month, and several small tornadoes were observed in southern Ontario.

July was also cool in Manitoba with temperature deficiencies averaging three degrees. Churchill averaged 2 degrees below normal for the month, but on the 1st, 2nd and 6th reported record lows for the airport for those dates of 31, 30 and 32 degrees, respectively, breaking the previous records of 34, 31 and 32 degrees. A warm spell in the third week lifted temperatures briefly into the nineties with record highs at The Pas.

Precipitation excesses in Manitoba in July were large to the south of Lakes Winnipeg and Manitoba, with excesses ranging to 100 per cent at Winnipeg and 150 per cent at Gimli. Below normal rainfall was recorded in the north, however, with Gillam and Churchill reporting deficiencies of 50 and 65 per cent, respectively.

Temperatures in Saskatchewan in July also averaged three degrees below normal, record low maxima at the end of the first week being partly balanced by record high maxima early in the third week. Yellow Grass, Moose Jaw, Regina and Pierson reported extreme maxima of 99 degrees on the 22nd.

July precipitation in Saskatchewan was generally above normal along the Saskatchewan Rivers, but below normal near the International boundary and near the Manitoba-Saskatchewan border. Deficiencies and excesses were generally small except for a small area from Rosetown to Saskatoon, where excesses were about 70 per cent.

Southeastern and eastern Alberta had July temperatures below normal, ranging from near normal in the central part to four or five degrees below normal near the International boundary. Temperatures were generally well below normal during the early part of the month, but recovered somewhat later with temperatures reaching the nineties in southern regions. The northern and western parts of the province had slightly above normal temperatures with the excesses reaching four degrees along the Peace River.

Although Calgary had slightly below normal rainfall in July, precipitation was generally much above normal in southern Alberta with the total fall exceeding three times the normal amount in the vicinity of Claresholm. To the north of the Red Deer River, precipitation was light with deficiencies of 50 to 60 per cent over most of the province, increasing to over 80 per cent at Beaverlodge and Grande Prairie. Edmonton recorded precipitation about 30 per cent below normal, but almost half the total fell in a thunderstorm on July 10th. Severe hail accompanying this storm did considerable damage in the city.

An extension into the Yukon of the normal summertime high pressure area between California and Hawaii continued to influence the weather in British Columbia during July. A month of record heat and drought climaxed a long period of above normal temperatures along the Pacific Coast. Temperature excesses increased westward from 2 degrees at Cranbrook to 9 degrees on the southern part of Vancouver Island. New records of extreme maximum temperatures for July were established at a number of Pacific coastal stations; the mean temperature 69.0 degrees at Vancouver Airport made it the warmest July on record for the airport station.

Although a few stations near the International boundary reported precipitation amounts above normal, July over most of British Columbia was almost rainless. Deficiencies ranged from 40 per cent at Creston westward to 100 per cent in the southwest, with Vancouver reporting .04 inch of rain and Victoria reporting no rainfall at all, equalling a record set in 1889 at the latter station. Victoria averaged 13.7 hours per day of bright sunshine.

Winds mainly from the west and southwest reached near gale force on six days at Victoria and Cape St. James and on July 12th a wind storm swept the southern interior valleys with brief gusts reaching 65 miles per hour at Penticton.

The fine weather of the Pacific Coast extended northward into the Yukon, and July 1958 was the hottest and windiest July on record at Whitehorse. The mean temperature of 62.0 degrees was 4.5 degrees above normal, and the total rainfall of .50 inch almost equalled the record dry July of 1951, which had only .38 inch of rain. The severe forest fire hazard was allayed somewhat by cooler cloudy weather during the latter part of the month.

The Northwest Territories had temperatures above normal in the Mackenzie Valley, below normal in Keewatin district, and above normal in Franklin district. Anomalies were not large, with Resolute showing the greatest departure from normal with mean temperature 3 degrees above normal. Precipitation amounts were light in the western Arctic, averaging about 1 inch, 30 to 50 per cent below normal. In the eastern Arctic precipitation excesses were general with Frobisher Bay reporting 2.9 inches, 81 per cent above normal.

JULY 1958

TEMPERATURE. PRECIPITATION AND SUNSHINE

The temperatures for the month are given in degrees Fahrenheit in the temperature columns under the following headings:
MAX. The highest temperature.
MIN. The lowest temperature.
MEAN The mean temperature for the month.
The remaining columns give the following information:
PRECIP. The total precipitation in inches for the month including the rainfall and the water equivalent of the snowfall.
SUN The total hours of bright sunshine for the month.
SNOW ON GRND. The depth of snow in inches lying on the ground at the end of the month (when reported).
The use of (A) following the station name indicates that the meteorological observations are taken at Airport offices and (R) indicates that the observations are taken at Radio Range Stations not at Airports.
